Aplicaciones web

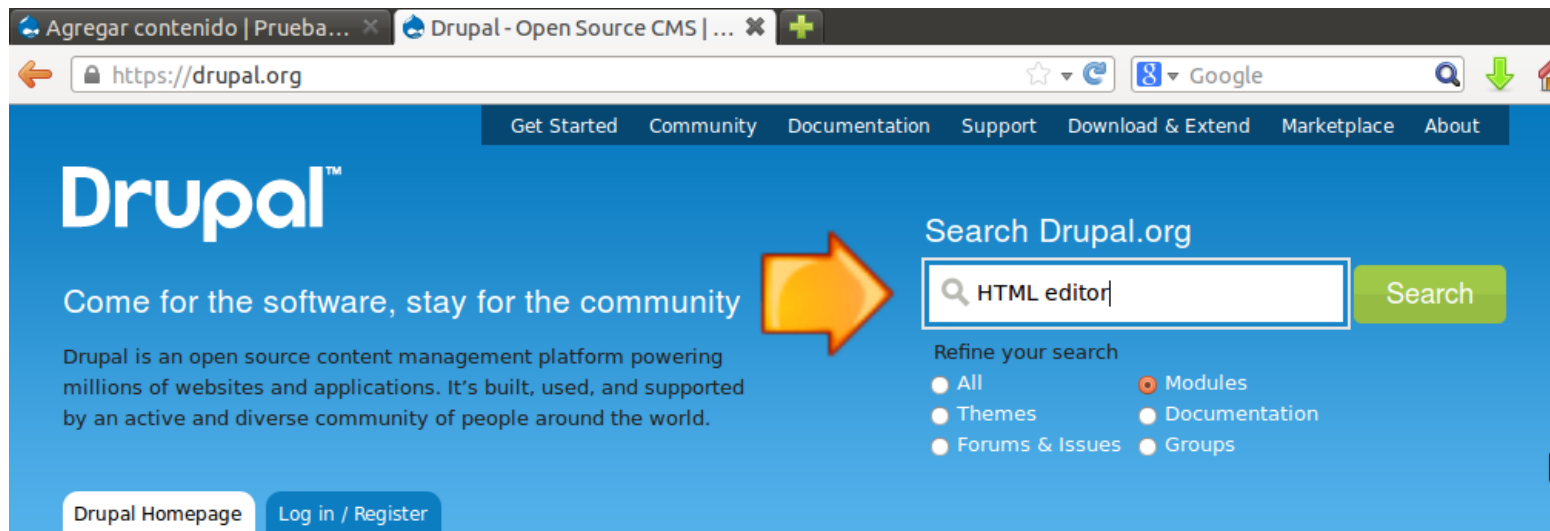

3.4 - Primer módulo

Drupal puede ser configurado y ampliado por el administrador de diversas formas: Módulos, temas, programas, ...

Para mejorar la experiencia de usuario vamos a realizar la instalación de un módulo que nos permitirá editar con mayor comodidad los contenidos de Drupal.

3.4 - Primer módulo

Accede a la página oficial de Drupal y realiza la siguiente búsqueda sobre los módulos.

Why Choose Drupal?

Use Drupal to build everything from personal blogs to enterprise applications. Thousands of add-on modules and designs let you build any site you can imagine. Join us!

CKEditor - WYSIWYG HTML editor

View Version control

Posted by [wwalc](#) on October 16, 2009 at 1:50am

This module will allow Drupal to replace textarea fields with the [CKEditor](#) - a visual HTML editor, sometimes called [WYSIWYG](#) editor. This HTML text editor brings many of the powerful WYSIWYG editing functions of known desktop editors like Word to the web. It's very fast and doesn't require any kind of installation on the client computer.

What is CKEditor?

CKEditor is the next version of FCKeditor. The editor has been rebranded and completely rewritten. It is now much faster (the code has been optimized), loads faster (the number of files has been reduced, so the browser will perform less HTTP requests) and developers

3.4 - Primer módulo

TAREA: Realiza
el proceso de instalación de CKEditor en Drupal 7.

The screenshot shows a web browser window with the URL `docs.cksource.com/CKEditor_for_Drupal/Open_Source/Drupal_7/Installation`. The page features the CKSource logo and navigation links for CKEditor Premium, CKFinder, Integrations, Customers, Support, and Contact us. A large orange arrow points to the breadcrumb navigation: `< CKEditor for Drupal | Open Source | Drupal 7`. Below this, the page title is `CKEditor for Drupal 7 Installation Process (Open Source Version)`. A warning box states: "These instructions assume that you install the CKEditor for Drupal module in the `sites/all/modules` directory (recommended). If you want to use the `sites/all/libraries/` directory, you will need to adjust the paths given in the instructions accordingly." The main text begins with: "If you want to install the CKEditor module on your Drupal 7 site, follow the steps described below. First of all, download the installation package (.zip or tar.gz archive) for Drupal 7 from the official CKEditor for Drupal module site at drupal.org. Unpack the contents of the installation package into the `drupal/sites/all/modules` directory. When the files are unpacked, you should see the following file structure inside the `drupal/sites/all/modules` directory:"

3.4 - Primer módulo

Si el resultado de la instalación es correcto cuando se intente crear o editar contenido de texto en formato HTML debe de aparecer el editor visual CKEditor.
